## **INSTALLATION METHOD FOR HEAD STUD KITS** Part Number: 260-4701 Application: Subaru 2.0L-2.5L DOHC EJ Series

- Inspect all hardware prior to installation. Look for obvious defects or shipping damages. Please call 800-1. 826-3045 with any questions or issues.
- To ensure proper thread engagement and accurate torque readings, clean all threads in the block. Chase 2. if necessary with ARP Thread Chaser, part number 912-0004 (M11 X 1.25)
- 3. Clean the spot faces on the cylinder head where the washer seats, use of solvent or brake/carb cleaner is recommended.
- 4. Install the head gasket and cylinder head.
- Screw the studs into the block hand tight, do not apply torque. The hex broach in the end of the stud is 5. designed to assist with installing/removing the studs from the block, not for applying torque.
- Then, using a clean, dry rag remove all oil from both sides of each washer. The cylinder 6. head and washer mating surfaces must be free of oil/grease/lubricant. Failure to keep these surfaces dry may result in inconsistent preloads.
- 7. Place the washers over the studs and on to the dry, clean spot faces of the cylinder head.
- Lubricate the stud threads and bottom of the nuts with ARP Ultra-Torque Fastener Assembly Lubricant. 8. Then install the nuts onto the studs and tighten hand tight.

## **TORQUE PROCEDURE**

9. Following the manufacturers recommended torque sequence, shown below, torque the nuts per steps 1-3

1- Tighten nuts 1 through 6 to 30 ft-lbs 2- Tighten nuts 1 through 6 to 60 ft-lbs 3- Tighten nuts 1 through 6 to 90 ft-lbs
